ESTABLISHED 2002 DAKOTA INTEGRATED SOLUTIONS

Foreword

"We first met in 2003 when Phil was the UK & Ireland Channel Lead at Honeywell and Keith, as Dakota's MD, was about to embark on the company's ascendancy into the Healthcare and Supply Chain sectors.

Since those early years and having maintained our ongoing friendship, our professional paths have since crossed once again, enabling us to collaborate and lead Dakota into new market sectors and initiatives whilst embracing emerging and cutting-edge technologies.

Capitalising on Dakota's significant reputation and success to date, we are both proud to be the Directors of a dynamic, forward-thinking team of experienced individuals who will no doubt help us to steer the business to further success whilst maintaining our continued drive for customer care and satisfaction.

Our ethos is to always be the industry's trusted advisers."

Keith Hardy
(Managing Director)

Philip Jarrett
(Commercial Director)

ABOUT DAKOTA

Dakota Integrated Solutions Ltd. is a technology-centric, customer-focused company which is well-versed in the provision and deployment of digital integrated data capture, printing, mobility, support and voice-directed solutions across a diverse range of environments.

Thanks to our team of experts and their years of industry experience, we provide our customers with the most up-to-date and fit-for-purpose tools they need in order to maximise efficiency and drive cost savings across their enterprise.

We offer our clients a consultative approach and are well-versed in offering advice and recommendations to help select the right devices and technology for their specific requirements, helping them to recognise their full potential through the deployment of fully automated systems that embrace their current business practices.

Dakota's expertise is driven by a constant focus on the developments within our customers' markets, and we are dedicated to providing our clients with a real competitive edge as a direct result of the solutions that are implemented.

Our ethos is to support and retain our clients through the provision of outstanding customer service.

Our value-add is our consultative approach. We offer advice and recommendations to help our customers select the right devices and technology for their specific requirements.

Our strength is the ability to offer a complete solution, enabling our customers to deal with only one supplier partner for all their data capture and printing requirements, whilst guiding them through the whole process, from product selection to implementation.

Our focus is our customers.

- Rapid Return on Investment
- Increase Productivity
- Maximise Efficiency
- Reduce Errors
- Improve Competitive Advantage
- Increase Safety

DAKOTA: YOUR COMPLETE SOLUTION PARTNER

With the ability to offer a complete solution which enables our customers to deal with only one partner for all their data capture requirements, we deliver tailored solutions to challenge and maximise our customers' competitiveness, working directly with them from initial analysis of business processes and feasibility study, through to design, implementation, training and after-sales support.

We are fully equipped to deliver solutions, services and support within new, existing or legacy ERP, WMS, MRP and IT infrastructures which help to optimise IT environments whilst working effectively and seamlessly within designated time-scales.

Our strong relationships with some of the industry's leading vendors enables us to offer our customers best-of-breed products, software and services, allowing them to maximise their output with minimal disruption to on-going daily routines.

Our innovative services have been competitively deployed within applications such as Distribution, Shop Floor Data Capture, Warehouse Management, Packaging Compliance and Proof of Delivery.

Our Mission Statement

"Our mission is to deliver a range of technology-centric, industry-leading data capture solutions into the hands of our customers which are designed to enrich and empower their business processes, whilst maintaining our service-focused approach.

As technological advances develop, so do our solutions. Thanks to our consultative methodology and strategic approach, combined with high levels of expertise and rich industry knowledge, we are well-placed to offer advice and recommendations to support our clients in the selection of the right devices and technologies for their specific requirements, helping them to achieve improved business practices through the deployment of reliable, innovative and fit-for-purpose solutions."

SUPPLY CHAIN SOLUTIONS

Thanks to a long and established history of successful mobility and printing installations, we are well-equipped to advise on the best supply chain solutions to fit our customers' requirements.

Manufacturing

Created with increased efficiency, cost reduction and real-time data capture at the process level in mind, our solutions collect data directly from production line assets, giving managers full, real-time control over data and costs.

Our solutions help to streamline data entry processes by eliminating paper-based data capture in order to provide an accurate and up-to-date overview across the entire organisation of ongoing processes and procedures, helping to increase traceability, efficiency and accuracy.

They also help to scrutinise production line statistics, enabling better quality control, improved adherence to production schedules and real-time order progress tracking, helping to monitor costs, improve customer service and reduce raw material wastage. And with the ability to provide historical records of manufacturing data, thanks to complete audit trail access, our customers can easily identify when a product was manufactured and by whom, should an issue arise.

Warehousing

In order to meet customer orders and keep a warehouse running as smoothly and efficiently as possible, it is important to ensure that production planning, stock rotation and inventory management are under full control.

We have a suite of products and solutions available which enable access to real-time stock levels, transaction data and order visibility, reducing the need for surplus stock and allowing the provision of accurate and realistic time-scales to the customer.

We can help streamline production and planning processes and maximise throughput, order accuracy and productivity whilst increasing customer satisfaction and profitability by removing unnecessary business costs.

By implementing automated multi-channel solutions to overall operations and key warehouse processes thanks to the latest Auto-ID hardware and software, paperwork administration is eliminated, enabling warehouse management teams to complete tasks faster and with more accuracy.

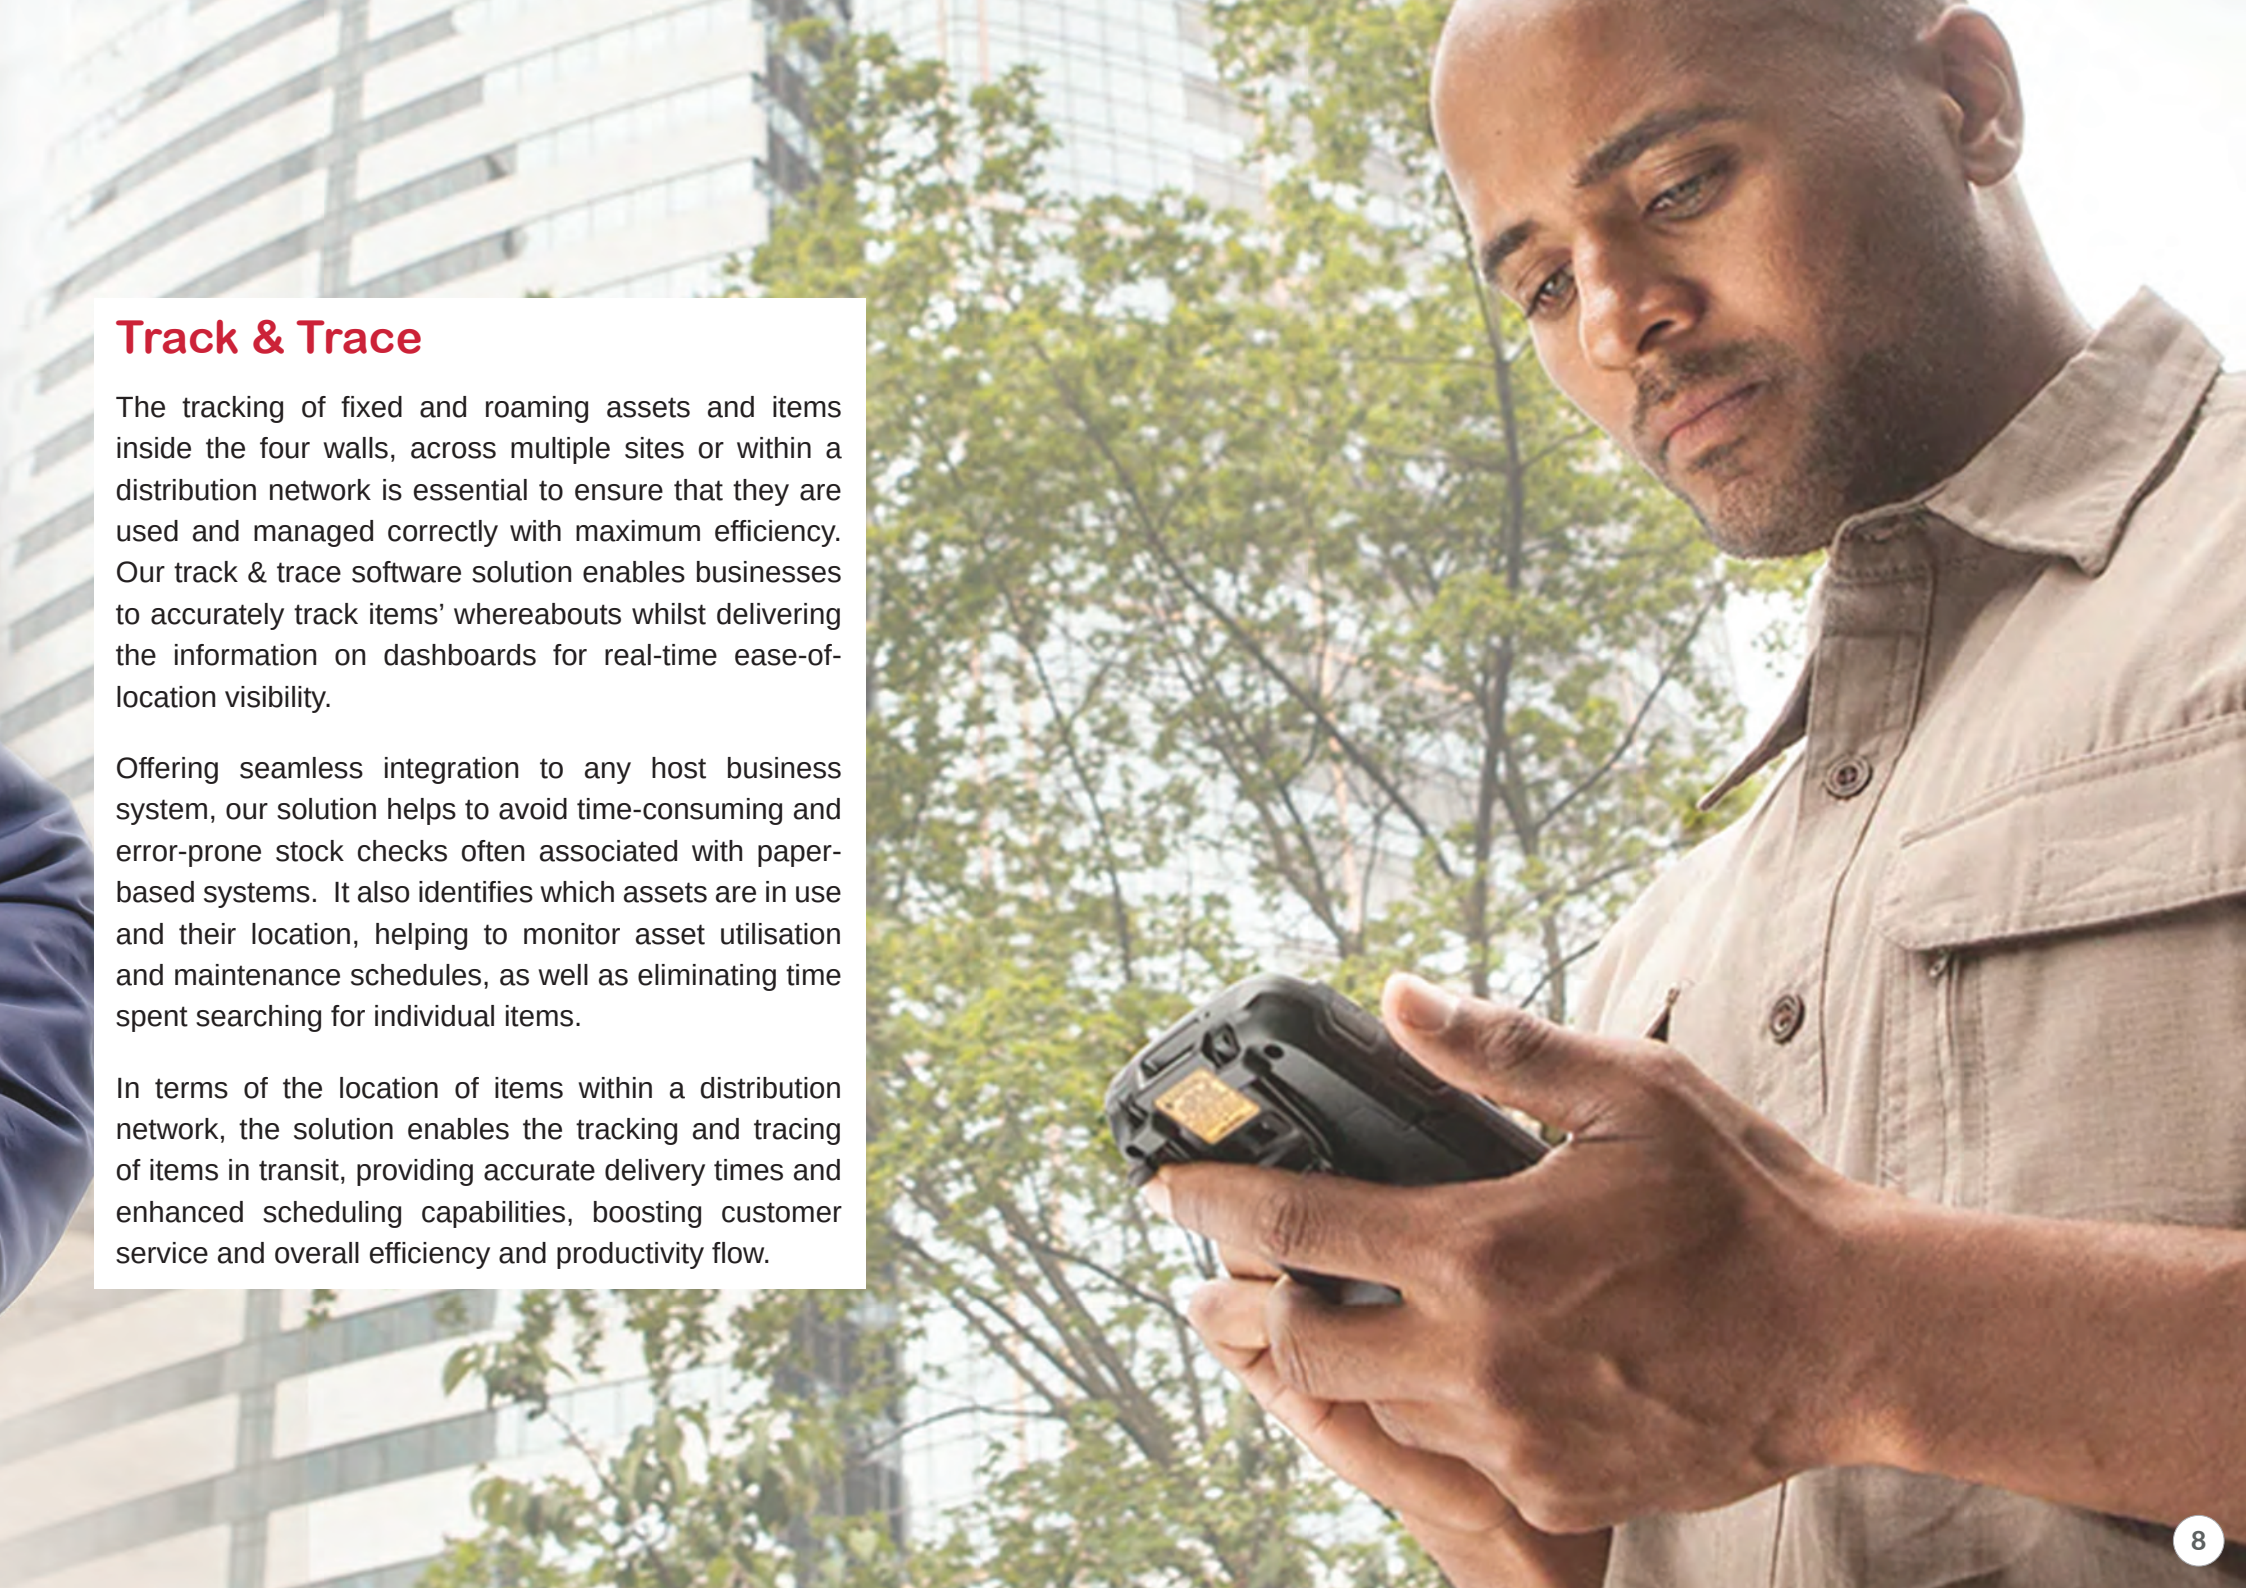

Electronic Proof of Delivery (ePOD)

For any ePOD application, the provision of reliable and accurate data is key. We understand these requirements, both from a business and consumer perspective, and have created a range of solutions whereby proof of delivery information is collected and distributed reliably, accurately and on time.

As well as facilitating the collection of signatures, images and data to prove that a delivery has taken place and feeding this information ‘back to base’ or to the customer in real-time, helping to improve client satisfaction and reduce the number of queries relating to incorrect or misplaced deliveries, we also understand the need to manage ‘return to depot’ processes, all of which can pose problems for businesses and consumers alike.

Our solutions are also equipped to handle route configuration and planning, helping to reduce costs through route efficiency, while GPS usage enables managers to pinpoint driver locations in order to provide up-to-date delivery time-scales and updates.

Track & Trace

The tracking of fixed and roaming assets and items inside the four walls, across multiple sites or within a distribution network is essential to ensure that they are used and managed correctly with maximum efficiency. Our track & trace software solution enables businesses to accurately track items' whereabouts whilst delivering the information on dashboards for real-time ease-of-location visibility.

Offering seamless integration to any host business system, our solution helps to avoid time-consuming and error-prone stock checks often associated with paper-based systems. It also identifies which assets are in use and their location, helping to monitor asset utilisation and maintenance schedules, as well as eliminating time spent searching for individual items.

In terms of the location of items within a distribution network, the solution enables the tracking and tracing of items in transit, providing accurate delivery times and enhanced scheduling capabilities, boosting customer service and overall efficiency and productivity flow.

Automation

It is of the utmost importance that today's manufacturing facilities ensure that their production processes are running as smoothly and as efficiently as possible. Failure to do so will result in a throughput reduction of mass-produced products and will ultimately have an adverse effect on margins, causing financial loss.

Thanks to our understanding of the need to implement effective automation processes in order to achieve maximum efficiency and increase manufacturing productivity, accuracy and throughput, our range of electronic automation solutions collect data directly from production line assets and communicate the information directly to the host system.

In comparison with error-prone manual processes, electronic automation reduces the costs which result from human error and helps to streamline production, making businesses more efficient and profitable.

"Our experience with Dakota has been nothing short of excellent. They are extremely customer focused and genuinely want the best for their customers, not only in terms of price but in the service that they offer and the products which they put forward for consideration. We would not hesitate to recommend Dakota to anyone."

Business Systems Manager, Georg Fischer

Read our Interview with Georg Fischer

GS1 Compliance

The need for barcodes and labels to be consistent at any stage within the supply chain is critical. Failure to do so will result in process interruptions, decreased throughput and a large amount of time and money spent on resolving issues. As a GS1 Partner, we understand the need for barcode readability and the supply of GS1-compliant shipping labels to ensure that the supply chain runs as efficiently as possible.

Thanks to years of experience, our team of experts is well-versed in the provision of the correct combination of data capture hardware, software and services in order to help achieve barcode readability goals, reducing the need for time-consuming and error-prone manual data entry, helping to create a successful, profitable and smooth-flowing supply chain.

Our relationship with GS1 combined with our deep industry knowledge base means that we are well-placed to advise on the best products and solutions to help achieve streamlined processes and enhanced product traceability through the adoption of GS1 barcoding standards.

GS1 UK Partner

VOICE SOLUTIONS

The Voice-Directed Warehouse

Run A Better Warehouse with Voice

Offering a wealth of advantages over traditional RF scanning and paper-based picking, voice-directed data capture solutions are fast becoming a popular choice within a variety of supply chain environments such as warehouses and distribution centres.

For businesses that have fast-moving picking environments, broad SKU lists and more than ten warehouse pickers, voice-directed technology is capable of producing game-changing results.

How Does it Work?

Conceptually similar to traditional paper or RF scanning methods, voice-directed technology uses the spoken word to communicate prompts and responses directly between the operator and host system.

Supporting the complete spectrum of warehouse processes, voice-directed technology enables mission-critical applications to become more streamlined, effective and productive due to the elimination of inefficiencies within virtually every aspect of the warehouse - helping remove unnecessary costs from the business.

Reduce Errors
by up to 50%

Instant validation of transaction data eliminates inefficiencies and increases accuracy throughout the warehouse.

Increase Productivity
up to 35%

Direct communication with the host system enables operators to confirm their actions verbally in real-time.

Decrease Training Time
by 50%

Voice-technology facilitates the training of seasonal workers and reduces the attrition rate of permanent staff by up to 30%.

Improve Safety
as much as 20%

Operators are equipped with a small wearable computer and headset, allowing them to work ‘hands-and-eyes-free’.

DCS Group
Video Case Study

Voice-Enabled Maintenance & Inspection

Attain Regulatory Compliance for Maintenance & Inspection

For many businesses, the documentation of maintenance and inspection processes is inefficient requiring the technician to enter observations and findings as a separate activity to the actual maintenance and inspection procedure.

At Dakota, we provide Honeywell Voice solutions that are purpose-built for the maintenance and inspection marketplace, enabling companies to run a better and more compliant business.

How Does it Work?

Voice-directed solutions are a real and viable alternative to more traditional pen and paper maintenance and inspection documentation methods, thanks to both prompts being delivered and operator responses provided through the spoken word.

This ‘hands-and-eyes-free’ technology removes the back-and-forth data entry and look up time on a laptop, handheld device or paper form, helping to save time whilst reducing the number of data entry errors.

Ensure Regulatory Compliance

- ✓ Use step results to identify high risk areas and eliminate costly points of failure
- ✓ Eliminate shortcuts and quality issues with full visibility of QC related issues
- ✓ Identify assets that require the most resources and maintenance activity
- ✓ Achieve consistent performance across sites

It Pays for Itself

Voice-directed technology can produce a rapid return on investment (ROI) whilst enabling businesses to elevate their documentation and compliance to levels never before attainable.

TRACK & TRACE: eTrakLogic

Transform Your Fleet with the New & Improved eTrakLogic® ePOD Solution from Dakota

New and improved, our eTrakLogic ePOD solution has been completely transformed, making it more feature and function-rich than ever before. Developed for the manufacturing supply chain, eTrakLogic is a cloud-based solution that has the ability to track any asset or item in transit.

It provides pick up and proof of delivery information alongside job scheduling and management, as well as notifications, comprehensive dashboards and reports relating to workforces, jobs and assets.

Manufacturing Supply Chain

eTrakLogic allows businesses with vehicle fleets of any size to increase productivity, reduce carbon missions and generate cost savings and efficiencies of up to 30%

Features & Benefits at a Glance

- Complete end-to-end solution
- Fully customisable & hosted solution
- Real-time data capture
- Replace manual processes
- Receive instant job updates
- Customisable alerts for items in transit
- Option to integrate with back-office systems
- Generate & export reports in various formats
- Simple & easy to use with multiple use cases
- Improved customer service

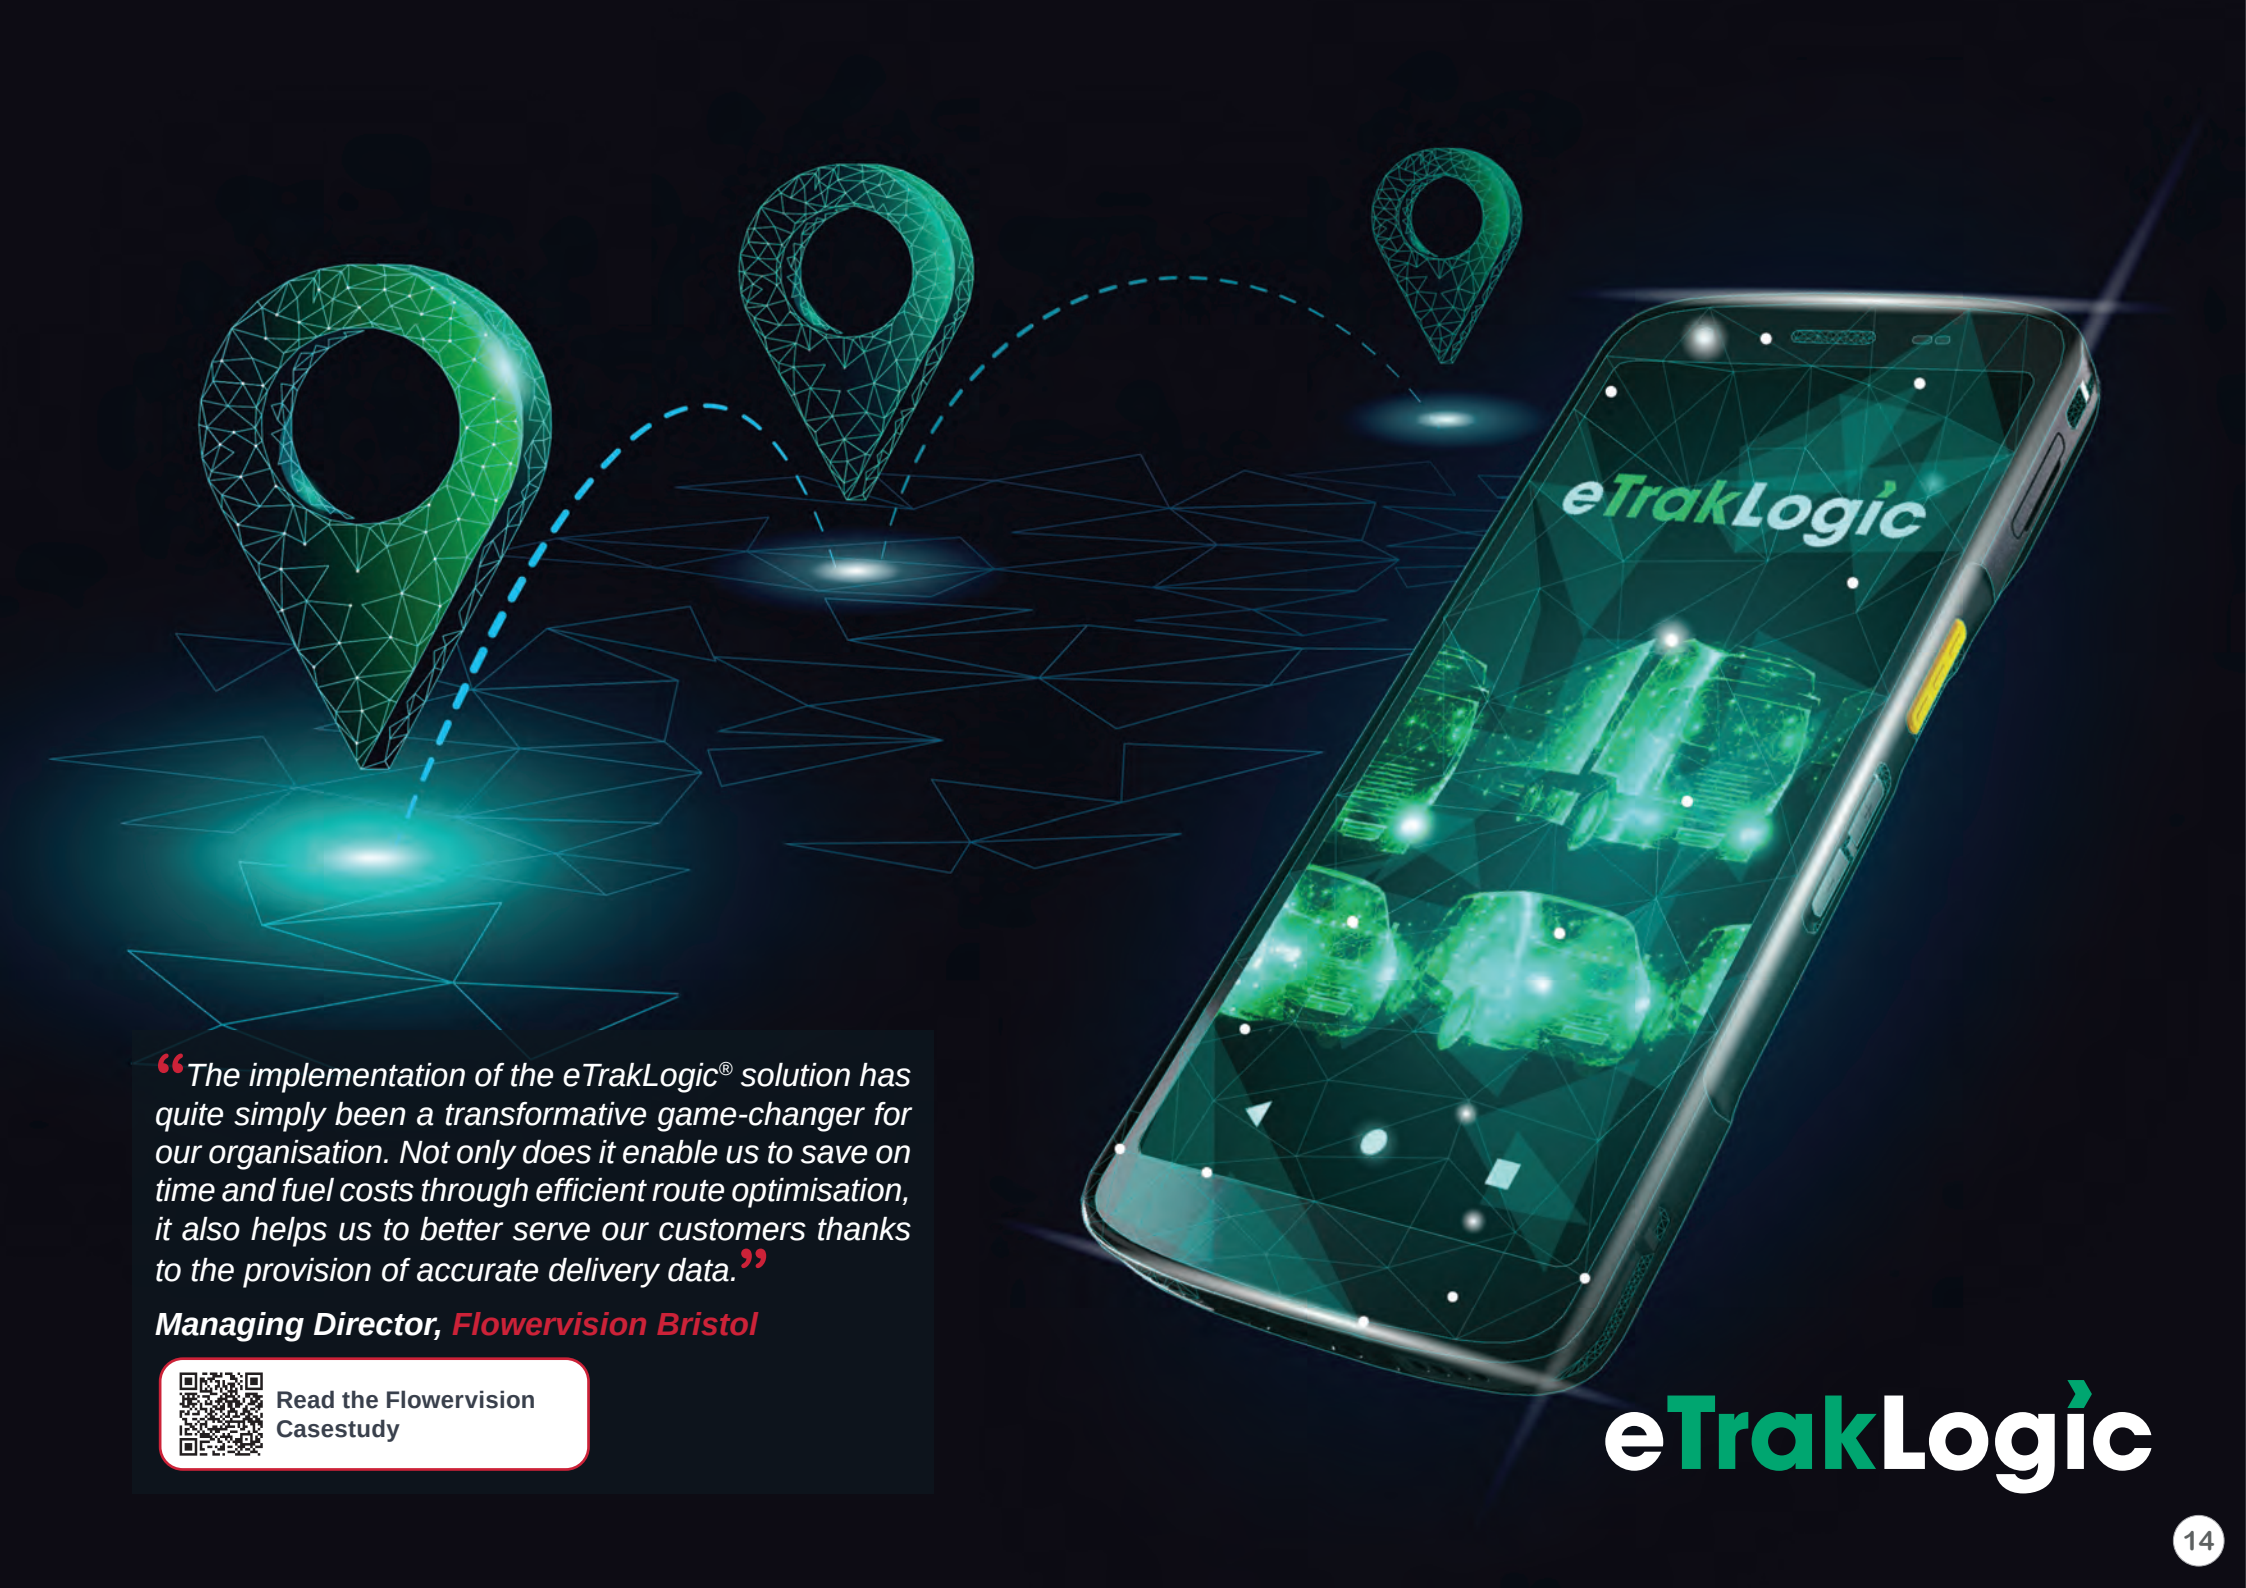

Real-Time Customer Service

Reduce Carbon Emissions

Secure Access To Mission-Critical Data

“The implementation of the eTrakLogic® solution has quite simply been a transformative game-changer for our organisation. Not only does it enable us to save on time and fuel costs through efficient route optimisation, it also helps us to better serve our customers thanks to the provision of accurate delivery data.”

JABRA AUDIO SOLUTIONS FOR THE SUPPLY CHAIN

With the Jabra portfolio of professional-grade audio and video collaboration tools, you can provide your team with the right equipment to deliver outstanding care. Whether you need video technology, or headsets and speakerphones to keep practitioners connected, there's a Jabra product that can help.

Jabra's products are designed to work for you, so you can get on with delivering outstanding care.

1. **World Leading Audio Brand: Jabra**
   Focuses on innovative sound engineering for improved work-life balance

2. **AI-powered solutions built for the modern workplace**
   Where speed, flexibility and connection matter more than ever

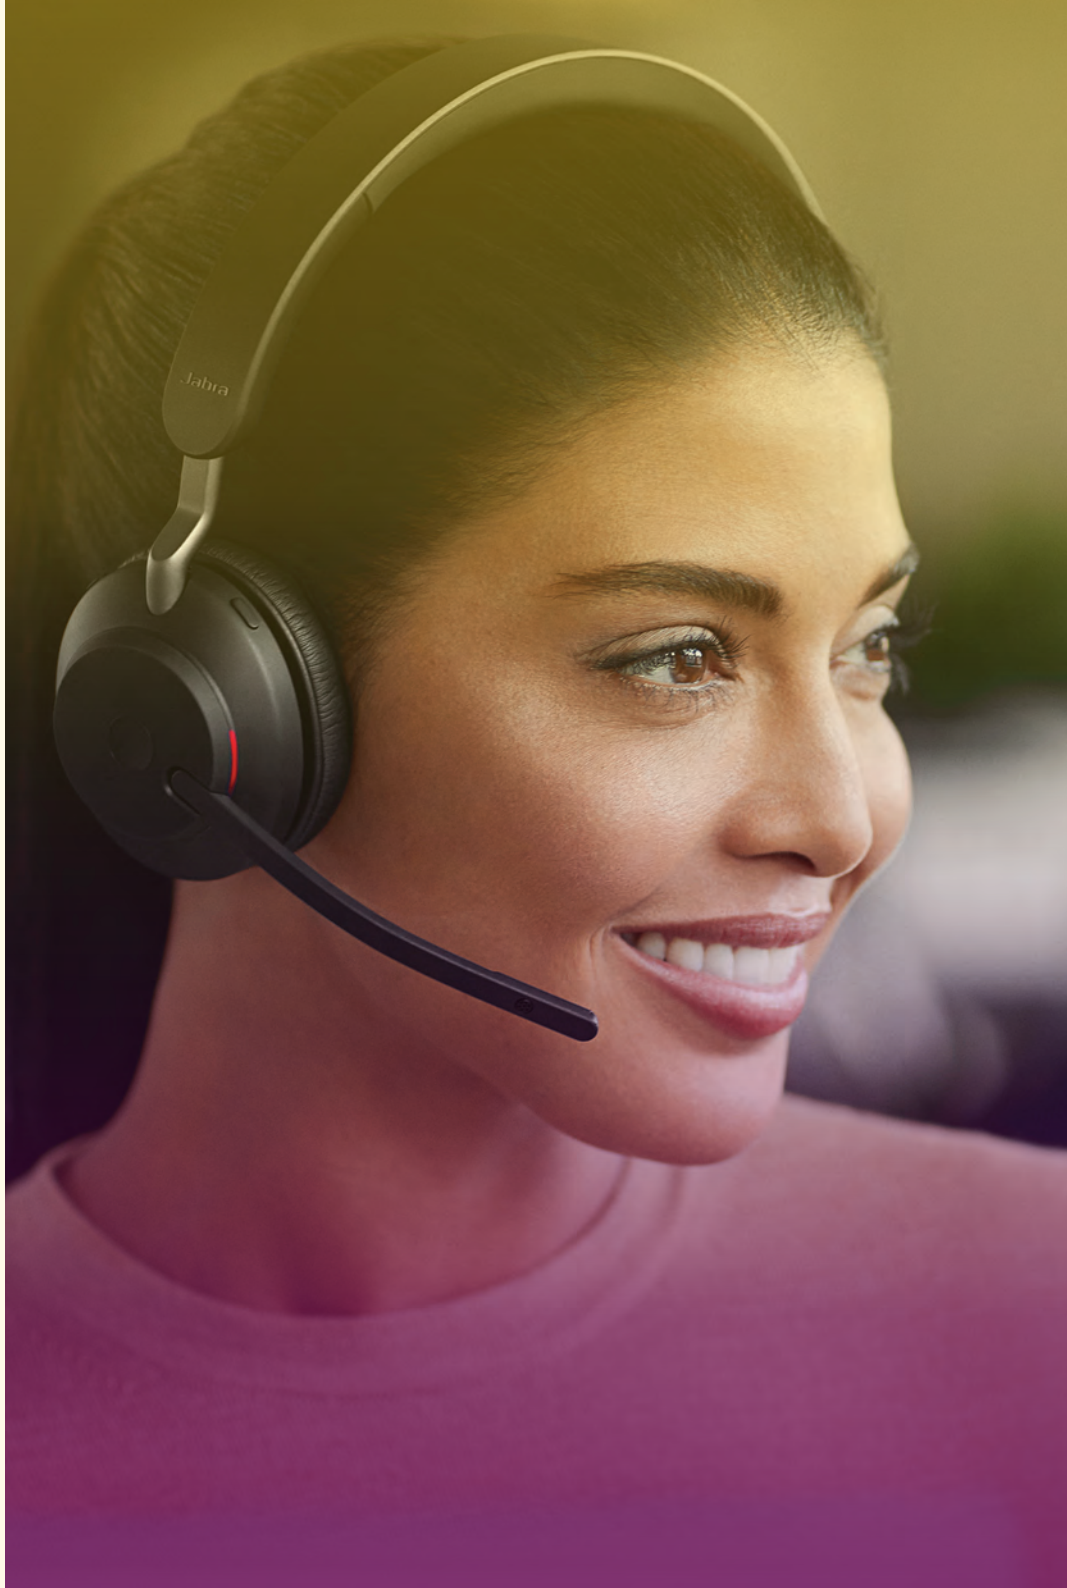

3. **Seamless collaboration and effortless scale**
   From boardrooms to breakout rooms, remote teams to frontline heroes

4. **Future-proof solutions**
   Deliver outstanding video & audio performance

5. **Professional audio technology that works the way you do**
   Maximum impact for teams with zero IT complexity

Jabra GN

AUTHORIZED PARTNER

How does Jabra's technology help your business?

- High-performing, award-winning headsets and speakerphones keep staff connected, ensuring team members can communicate easily and seamlessly when it matters
- Certified for: Zoom Rooms and Microsoft Teams Rooms, Jabra's audio solutions are compatible with all leading communications platforms
- Delivers outstanding video and audio performance

Tailor made or plug & play solutions?

- Maximise flexibility and portability with plug-and-play functionality for instant connection anywhere
- Jabra's range of intelligent and collaborative meeting room systems are built around its award-winning PanaCast 50 Video Bar System (VBS)
- Support flexible deployment including optional touch controller & 'Bring Your Own device' BYOD mode

Where can Jabra Audio Solutions be used?

- Anywhere from conference suites to treatment rooms, as well as education facilities and customer service functions
- Where high definition, intelligent 180° video technology is needed to show the whole treatment room or lecture theatre
- When every word must be heard clearly and privacy ensured, a noise-cancelling headset with professional-grade sound is a must

KIOSKS

Designed for consumers and built for business, Zebra's Kiosk System offers a comprehensive, flexible and modular solution for a variety of self-service, assisted checkout and display needs.

Suitable for a range of industries including manufacturing, government, retail, hospitality and healthcare, the kiosks meet the demands of public spaces while supporting accessibility requirements.

Facilitating transactions whenever customers or associates need to input and verify information, the kiosk system can be customised with a barcode scanner, printer, light bar, payment terminal or a conversational digital assistant.

- ✓ Supports accessibility requirements
- ✓ Versatile wall, floor, counter & desk mount options
- ✓ Can be placed in portrait or landscape mode
- ✓ Easy viewing regardless of lighting
- ✓ IP65 durability rating

LOFTWARE LABELLING SOLUTIONS

The simplest way to meet all your labelling needs

Ideal for Single Site, Smaller Businesses

Loftware is an easy-to-use cloud-based label design tool that gives you the easiest out-of-the-box label printing experience. Quickly produce professional labels without making investments in training and coding.

Ideal for Growing, Multi-Site Businesses

With Loftware, you can manage your entire labelling process in an easy-to-use system, designed for rapid deployments at one site or across multiple locations.

The solution provides everything you need to manage your labelling process, from design to print, in one, intuitive system. With easy integration into your business systems, you can centrally manage your labels and automate your labelling QA process.

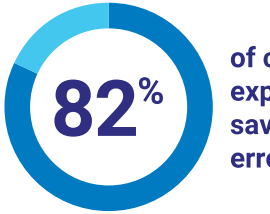

Loftware Cloud

Cloud Technology has transformed the way we work. Everything from file sharing and collaboration tools to critical business systems have moved to the cloud, creating more flexible and responsive work environments.

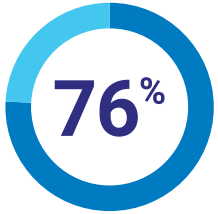

The Loftware Product Line Benefits

Customers typically get ROI in less than

6 months

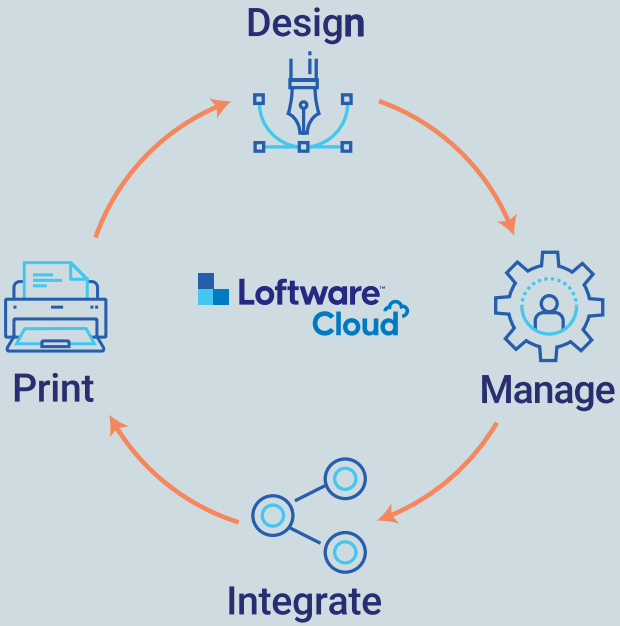

of customers experienced cost savings due to error reduction

of customers say they have reduced time-to-market

SPECIALISTS IN LABELLING & PRINTING SOLUTIONS

Labelling

As a leading Zebra partner, we can offer competitive pricing on the complete range of Zebra Genuine Labels, while our strong relationships with alternative leading label manufacturers gives us the ability to support your label printing requirements, whatever they may be.

Available in a choice of sizes, materials and adhesive options, our offering of barcode labels is compatible with commonly used thermal transfer and direct thermal printer models.

We also offer a range of pre-printed labels including warehouse racking labels, as well as laser labels on A4/A5 sheets.

Our free of charge on-site consumables audit is an hour-long observation performed by one of our specialists whereby a thorough investigation of your label and printing consumables usage will be undertaken.

During the audit, our specialist will take you through a summary of their findings and help to configure a supply plan moving forward which will benefit both you and your business.

Printing

To complement our labelling solutions, Dakota also offers a range of state-of-the-art printers for mission-critical applications from leading manufacturers such as Zebra, Brother, Honeywell and Evolis.

DATA CAPTURE PRODUCTS

We supply state-of-the-art products for mission-critical supply chain applications from leading manufacturers such as Zebra, Honeywell, Datalogic and Brother.

Our comprehensive hardware range includes mobile computers, rugged PDAs, terminals, tablets, barcode scanners, rugged smartphones, wearable devices, RFID devices, voice-enabled hardware and accessories.

As a business we have experience in finding the very best solutions for your supply chain and manufacturing data capture requirements, whatever they may be.

"Dakota took the time to understand our requirements and couldn't have been more helpful and knowledgeable. Our experience with Dakota has proved that they are an extremely customer-focused organisation and gave viable, intelligent advice in order to help us achieve our end goal. Our experience with Dakota has been nothing short of exceptional."

Intelligent Cabinets

ZEBRA

Zebra Intelligent Cabinets allow your operations to optimise how enterprise mobility devices are stored, accessed, tracked and managed to harness the most efficient use of both devices and workers.

Designed and developed to ensure that assets and workflows work in tandem with high performance and optimal security, the cabinets help to maximise the long-term function and lifecycle of each device through effective management, ensuring that each product is ready for use at the start of every shift, avoiding manual disruption and documentation. Thanks to secure, authorised-only device storage, Zebra Intelligent Cabinets also enable the controlled issuing of devices and device traceability, while a UV drawer facilitates device sanitation before use.

- Greater worker accountability
- Prevent device abuse, damage & loss
- Minimise repairs & replacement
- Reduce device quantities & cost
- Protect devices with authorised-only security
- UV drawer for device sanitation

Keep Track of All Your Mobile Devices with Waizu Solutions

Mobile device-based solutions have become a critical part of warehousing and supply chain operations, however it is estimated that between 12% and 15% of mobile devices are lost or misplaced every year.

If there is a shortage of mobile devices or if devices are not running at full capacity, this will have a direct impact on operational workflows and track and trace systems.

On average, workers can waste up to twelve minutes per shift trying to locate missing mobile devices. The Waizu Device Finder Solution can give back that wasted time and significantly increase throughput within any warehouse or supply chain facility.

It also ensures that each device location can be accurately pinpointed as well as indicating information such as its battery state, who is using or has used the device, alongside providing alerts when a device looks like it is lost or missing, to support device location and retrieval.

Read Waizu's Exclusive Interview with Manufacturing & Logistics IT

Controlled Access Solutions for the Supply Chain

Partnering with Imprivata, a leading provider of access management solutions for the manufacturing supply chain, Dakota offers fast, secure user authentication solutions including single sign-on and badge-tap access.

The Imprivata solution is purpose-built for industries where shared devices, speed and security are mission critical. Boosting frontline worker efficiency, it eliminates login friction, strengthens security and helps organisations to drive better outcomes, whilst streamlining access to operational technology for technical staff and third-party vendors.

Fast User Switching
Tap badge or use biometrics to instantly access your session and applications.
- Reduces login time from minutes to seconds

Shared Device Access
Secure, seamless access for multiple users on shared workstations and devices.
- No shared passwords
- Automatic session locking & faster user switching

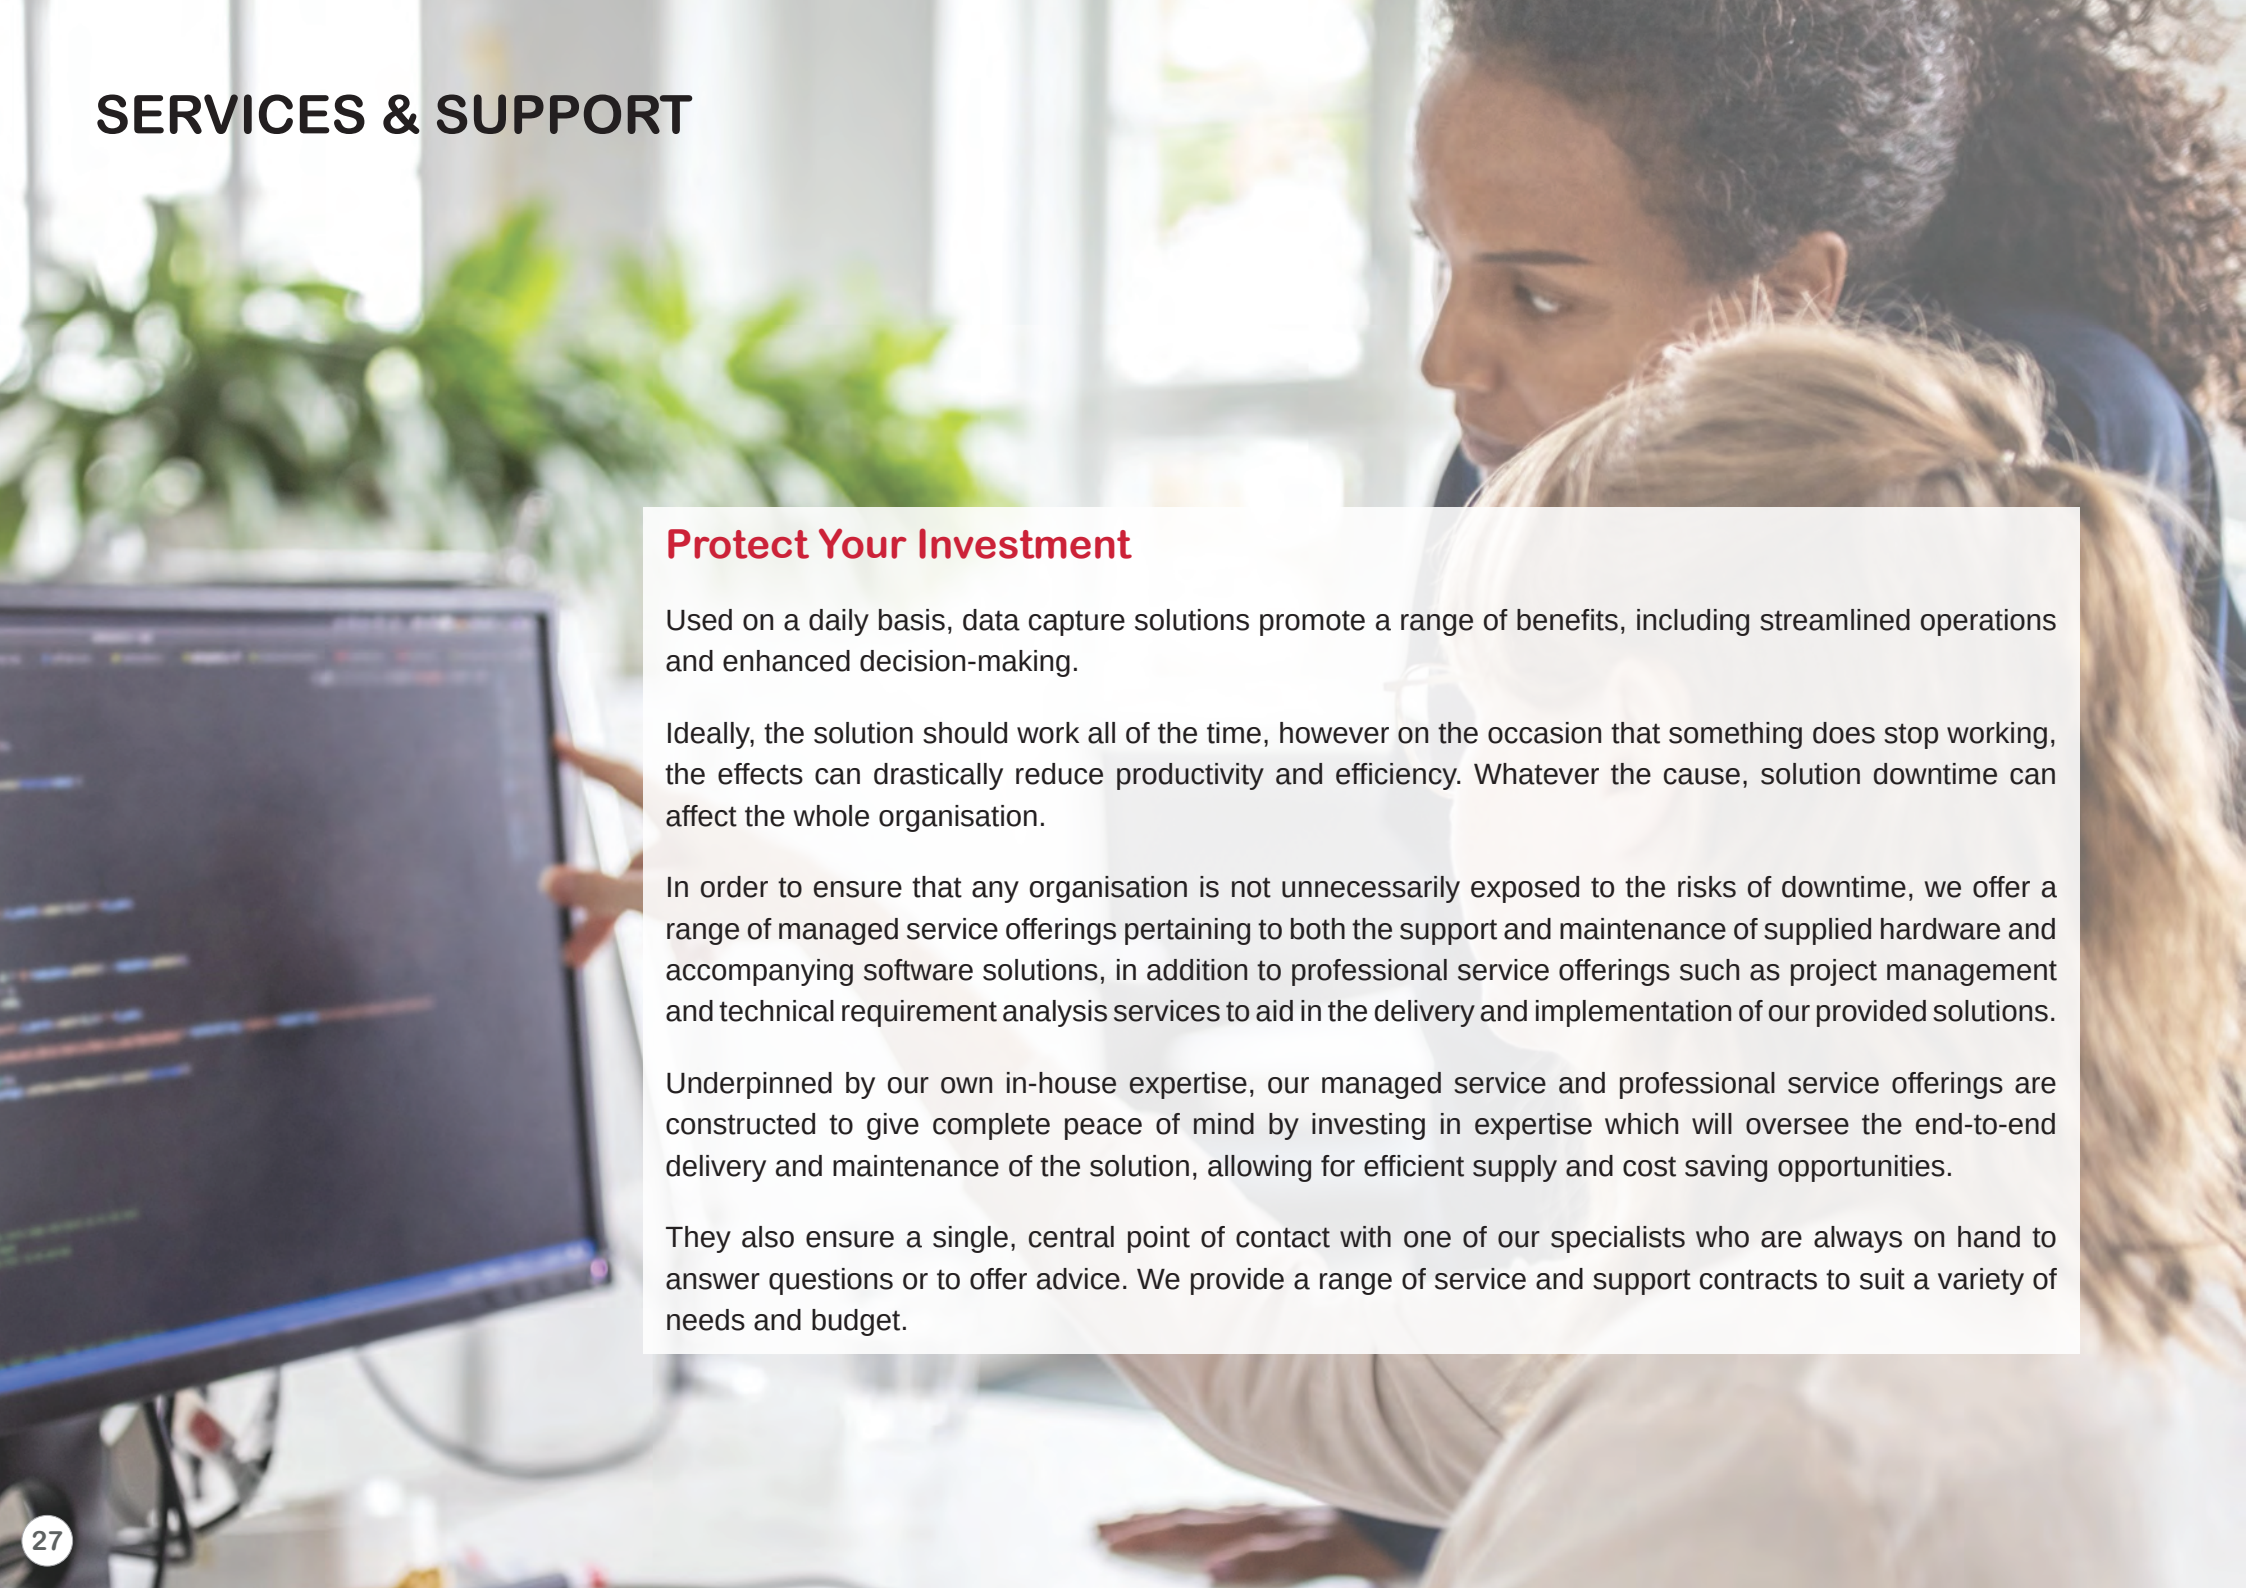

Strong Security & Compliance
Enforce strong authentication and identity policies with complete visibility and audit.
- Reduce risk & protect sensitive data
- Meet regulatory & audit requirements

90%	30%+	70%	100%
Faster Logins	Productivity Gain	Fewer Password Reset Requests	Audit and Compliance Confidence

"In terms of Supply Chain environments, simple and secure access management keeps work moving, enabling an increased drive in productivity without having to use complex passwords and convoluted sign in procedures. This helps to reduce risk, meet compliance standards and prevent unauthorised access to IIoT systems."

Philip Jarrett, Commercial Director at Dakota

SERVICES & SUPPORT

Protect Your Investment

Used on a daily basis, data capture solutions promote a range of benefits, including streamlined operations and enhanced decision-making.

Ideally, the solution should work all of the time, however on the occasion that something does stop working, the effects can drastically reduce productivity and efficiency. Whatever the cause, solution downtime can affect the whole organisation.

In order to ensure that any organisation is not unnecessarily exposed to the risks of downtime, we offer a range of managed service offerings pertaining to both the support and maintenance of supplied hardware and accompanying software solutions, in addition to professional service offerings such as project management and technical requirement analysis services to aid in the delivery and implementation of our provided solutions.

Underpinned by our own in-house expertise, our managed service and professional service offerings are constructed to give complete peace of mind by investing in expertise which will oversee the end-to-end delivery and maintenance of the solution, allowing for efficient supply and cost saving opportunities.

They also ensure a single, central point of contact with one of our specialists who are always on hand to answer questions or to offer advice. We provide a range of service and support contracts to suit a variety of needs and budget.

FINANCE & LEASING OPTIONS

Thanks to a variety of finance and leasing options available from our preferred supplier, we can assist with data capture equipment, software, support and solution purchases.

Examples of some of our options include:

Fair Market Value Lease

Rent equipment for an agreed period of time and at the end of the term either upgrade the asset, hand the asset back, purchase the asset or continue renting the asset on a casual basis

Equipment Rental

Full pay out lease with VAT paid back with each rental instalment

Hire Purchase

Pay for the asset over agreed instalments with VAT owed up front

We can also look at alternative options and help to structure payments, including payment deferrals or monthly, quarterly and annual instalments and will do everything we can to help to find the right payment plan to accommodate a range of budgets and requirements.

"The main business benefit of working with Dakota is supply reassurance, confidence and total peace of mind. They are an extremely customer-focused organisation with a fantastic degree of knowledge. Products are always delivered on time and they offer a rapid response in the event of any queries. I would not hesitate to recommend Dakota to anyone."
